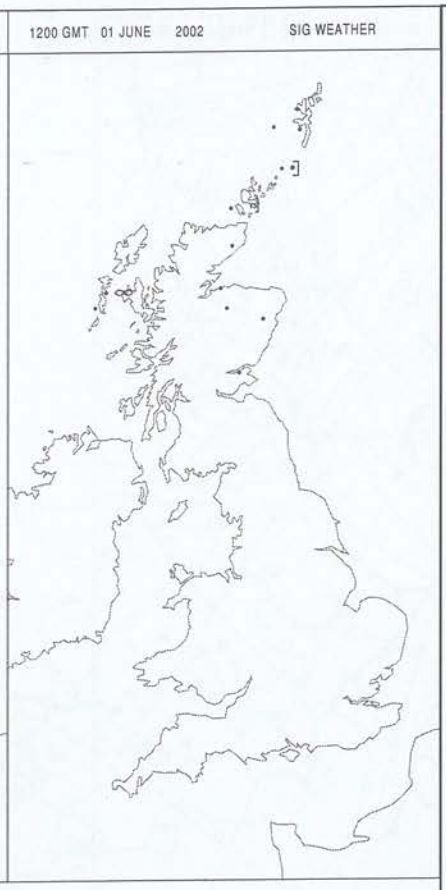
SIGNIFICANT WEATHER



Summary of UK Weather for Saturday 01 June 2002.

Scotland, especially the west, was cloudy with periods of rain overnight and during the morning, but many south-eastern parts of Scotland stayed dry with clear or bright spells, and during the afternoon it became dry with bright spells over much of Scotland. Northern Ireland was generally dry, but rather cloudy at times overnight with some rain at first in the north, but bright or sunny spells developed during the day. However, further rain reached Northern Ireland and western Scotland later in the evening. The far north of England, west Wales and southwest England were dry and quite sunny but with rather a lot of high cloud later. Towards midnight, showery rain, affected the Anglesey to southeast Ulster to the Isle of Man to west Cumbria area. The rest of England and Wales was dry and sunny or clear, with very little in the way of cloud throughout the whole day.

Temperatures were generally above the seasonal normal with many places, especially in England and Wales, becoming very warm inland, but many coastal parts were somewhat cooler.

EXTREMES

Highest Maximum:
24.6 Leeds W.C., West Yorkshire
Lowest Maximum:
11.9 Lerwick, Shetland
Lowest Minimum:
3.9 Pembrey Sands, Dyfed
Lowest Grass Minimum:

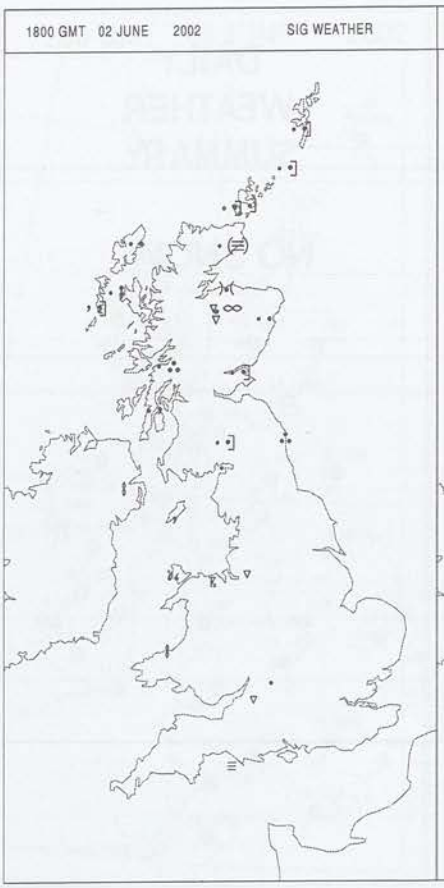
SIGNIFICANT WEATHER



Summary of UK Weather for Sunday 02 June 2002.

Much of the country was dry through the early hours with clear skies with a little patchy mist towards dawn. However, Scotland and Northern Ireland had outbreaks of rain which became persistent and subsequently extended to the Isle of man and Northwest Wales.

A few showers followed behind the rain into the outer Hebrides, whilst the rain continued across northern England and into west Wales. As the rain crossed North Wales the odd rumble of thunder occurred and this became increasingly a feature through the morning. To the south and east it was fine and dry and very warm under the hazy sunshine with the highest temperatures in mainland Britain so far in 2002.

During the course of the afternoon it continued to be wet in southern Scotland and northern England and indeed there was some very heavy rain across the Lake District where thunder became increasingly prevalent.

Further south showers gradually fed eastwards with some isolated thunderstorms, but south of the Pennines amounts of rain were generally small.

Temperatures were very warm or hot in the south and east but near normal in the north and west.

EXTREMES

Highest Maximum:
26.8 Heathrow, Greater London
Lowest Maximum:
12.0 Lerwick, Shetland
Lowest Minimum:
6.3 Cranwell, Lincolnshire
Lowest Grass Minimum:

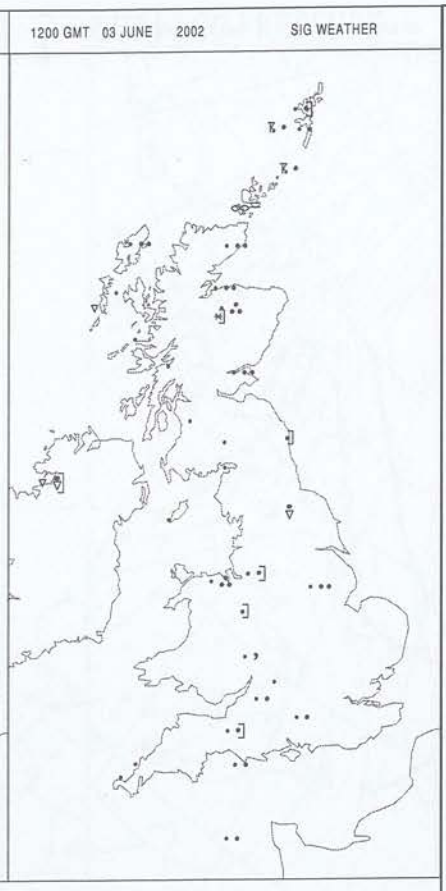
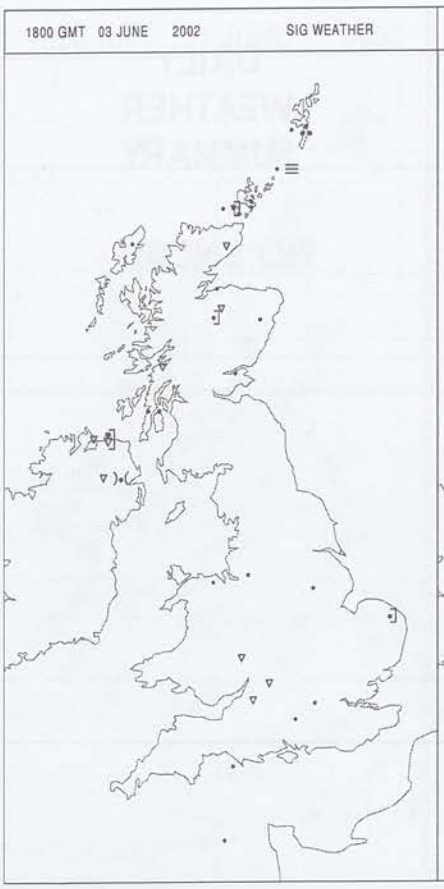
SIGNIFICANT WEATHER





Summary of UK Weather for Monday 03 June 2002.

Through the early hours easternmost parts from Scotland down to East Kent experienced frequent thunderstorms with some substantial falls of hail and localised torrential downpours in the north. Further west it was mainly dry with clear spells at first, but rain pushed right across Northern Ireland through the small hours arriving on the west coast of the mainland soon after dawn.

Outbreaks of rain were quite heavy at first across Wales but across southern parts the rain area weakened as it spread further east. It remained more coherent as it crossed the Midlands, Lincolnshire and Yorkshire late morning or early afternoon, but just patchy light rain crossed Southeast England and East Anglia early to mid afternoon.

Late afternoon and early evening the trough following the rain band, which in many places in the south gave just sporadic light rain turned thundery, as it arrived in Lincolnshire and east Yorkshire.

Temperatures were rather warm up the east coast from Southeast England to eastern Scotland but western areas were mostly rather cool.

EXTREMES

Highest Maximum:
20.1 Manston, Kent
Lowest Maximum:

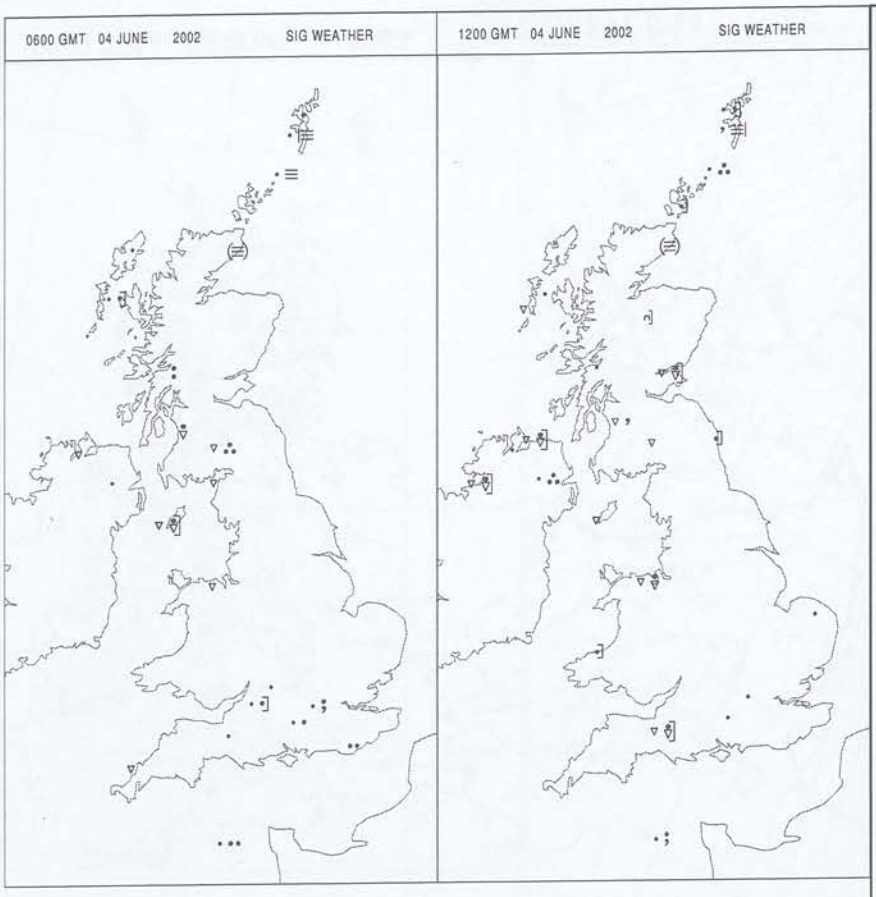
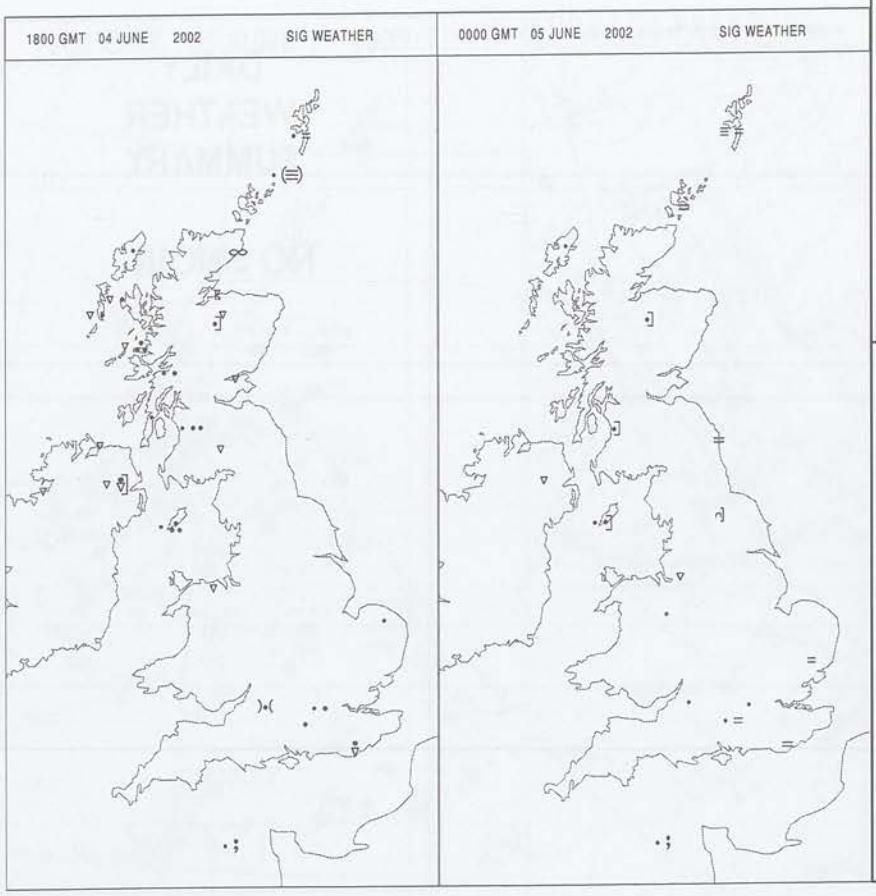
SIGNIFICANT WEATHER





Summary of UK Weather for Tuesday 04 June 2002.

The night was rather cloudy in most places, although lengthy clear spells occurred over eastern England at first. There were some showers in the west, and over southern and eastern England some showery rain occurred during the latter part of the night. The northern Isles of Scotland were foggy with occasional rain and drizzle.

During the day, the northern isles of Scotland remained dull and damp, but the rest of Scotland had a mixture of sunshine and showers. The showers were heavy in places with thunder reported from the Moray Firth area. Many coasts had a good deal of sunshine. Northern Ireland had plenty of cloud with showers, these merging into longer spells of rain, especially during the morning. England and Wales had rather cloudy skies, although coastal counties in the west had some lengthy spells of sunshine. Many places were dry, but showers occurred in the northwest of England, and patchy rain affected some southern and eastern parts of England during the late afternoon and evening. Most parts were rather cool or cool.

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 05 June 2002.

The night was predominantly cloudy with outbreaks of rain in places. A band of rain spread north from France across southeast England and thence into East Anglia.

During the morning the rain extended north from East Anglia and then west across eastern England and eventually eastern parts of Scotland. Elsewhere the rain was light and patchy and in western parts of the UK there were sunny periods, especially in the Outer Hebrides, Northern Ireland, west Wales and Cornwall. Later in the morning some heavy bursts of rain drifted northwest out of France and across south and southeast England, as well as East Anglia. During the afternoon this rain continued to edge north and west across the Midlands, Yorkshire and Northumberland and some very heavy and thundery outbreaks developed across southeast England. The rain over eastern Scotland persisted and rain spread across Wales but elsewhere the weather was mainly dry.

Temperatures were in the warm category in Northern Ireland, western Scotland, parts of south Wales and southern England but elsewhere they were mostly near normal or in the rather cool category.

EXTREMES

Highest Maximum:

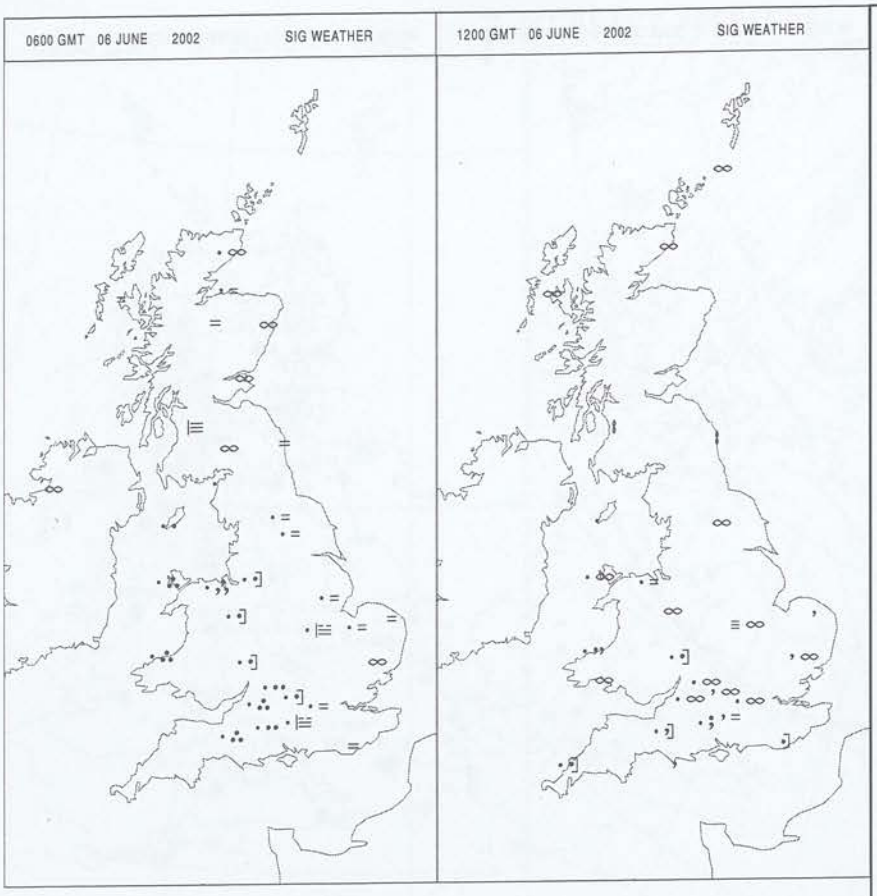
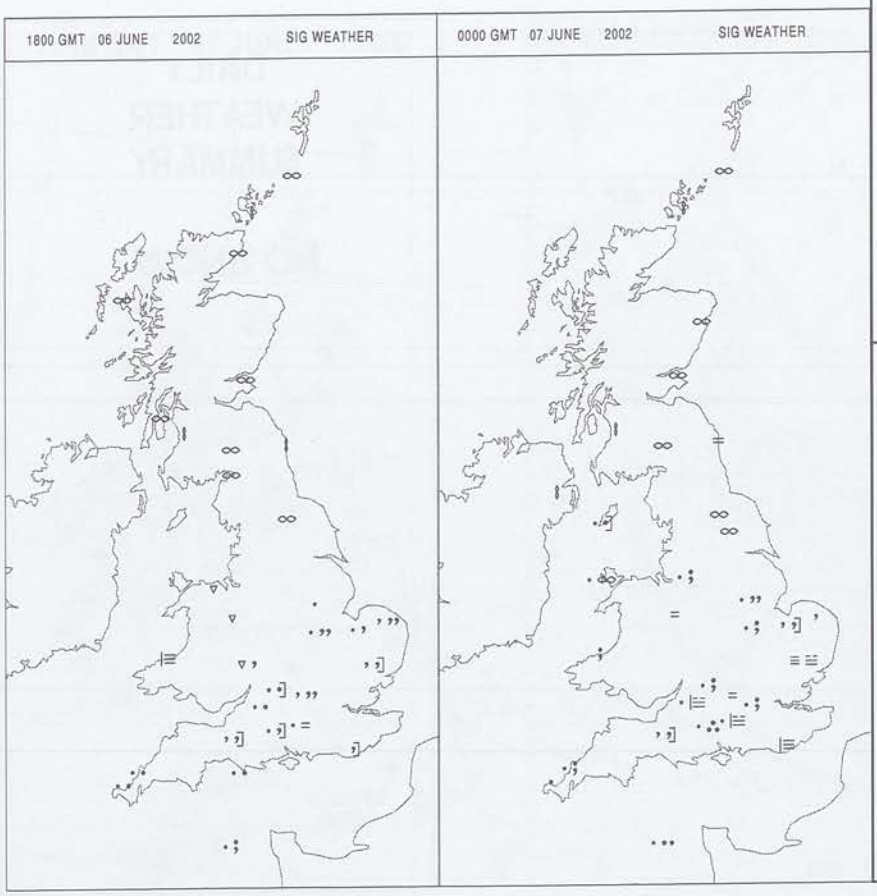
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 06 June 2002.

Overnight an area of rain drifted west across central and southern England and into Wales. Some of the rain was heavy and locally thundery but it gradually petered out from the east. Elsewhere the weather was predominantly dry.

During the morning the area of rain weakened as it moved west and then south reaching Cornwall before midday. Patchy rain developed across southeast England, the Midlands and central Wales by midday but the rest of the UK was essentially dry, albeit rather cloudy. The best of today's sunshine was across the Hebrides and Shetland but lengthy spells were recorded in Aberdeen and Cumbria. The afternoon saw further outbreaks of rain across southwest England and parts of Wales and some locally sharp showers developed during the evening in a line from south London to Gloucestershire to mid Wales. Further north the weather remained dry.

Temperatures were well above average in parts of Scotland where it was a very hot day, and it was hot in northwest England, but parts of Cornwall had a cool day with values no higher than 12 Celsius.

EXTREMES

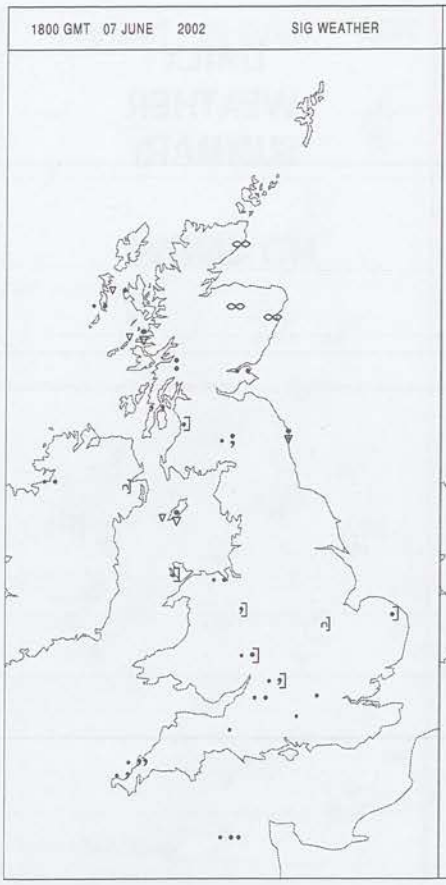
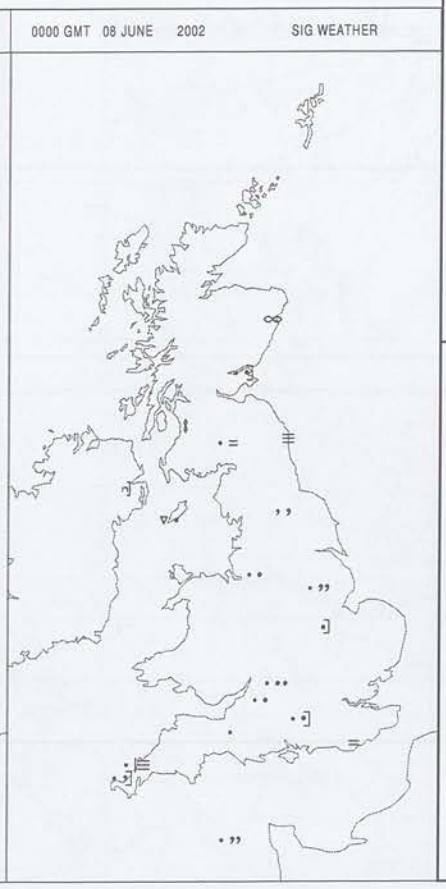
SIGNIFICANT WEATHER





Summary of UK Weather for Friday 07 June 2002.

England, Wales and Northern Ireland had a cloudy night with patchy rain and drizzle. It was generally misty with fog patches. Scotland had a dry night with clear periods, but it was mostly cloudy in the far south.

Much of England, Wales and Northern Ireland had a cloudy day with patchy rain and drizzle. Most of this occurred over southern England, although further rain and fog patches developed across northeast England during the afternoon. Some bright or sunny intervals did appear, notably across parts of Lincolnshire and northwest England. A line of showers, locally heavy, developed over the Midlands, parts of northwest England and Flintshire during the afternoon and evening.

Much of Scotland enjoyed sunny periods or hazy sunshine, especially in the north and west although isolated thundery showers developed around the Western Isles. An area of rain moved across southeast Scotland before extending to central and western parts during the afternoon and evening. It was a dry and very sunny day in Orkney and Shetland.

It was mostly rather cool, but locally warm in the brighter spots. It was very hot in parts of Scotland.

SIGNIFICANT WEATHER

Summary of UK Weather for Saturday 08 June 2002.

Much of the United Kingdom had a cloudy, mild night with haze and mist patches, although fog patches were observed across southeast Scotland, northeast England and over the Pennines. The cloud produced occasional rain and drizzle, notably for the Midlands, northern England and southeast Scotland. Clear spells developed over southeast England and it was mostly clear across the Northern Isles.

Most of the rain and drizzle, which was locally heavy over eastern Scotland, petered out to leave a mainly dry and rather cloudy morning across the United Kingdom. The best of the bright or sunny periods were over Shetland, East Anglia and in the Cardiff area.

Further small areas of rain and drizzle developed together with a scattering of showers during the afternoon and evening. A few heavy showers were reported, with a thunderstorm in the Glasgow area. It remained misty or foggy along parts of the east and southeast Scottish shores. Some bright or sunny intervals developed and it continued sunny around Shetland.

Afternoon temperatures were near normal or in the warm category, although it was very warm across parts of Scotland.

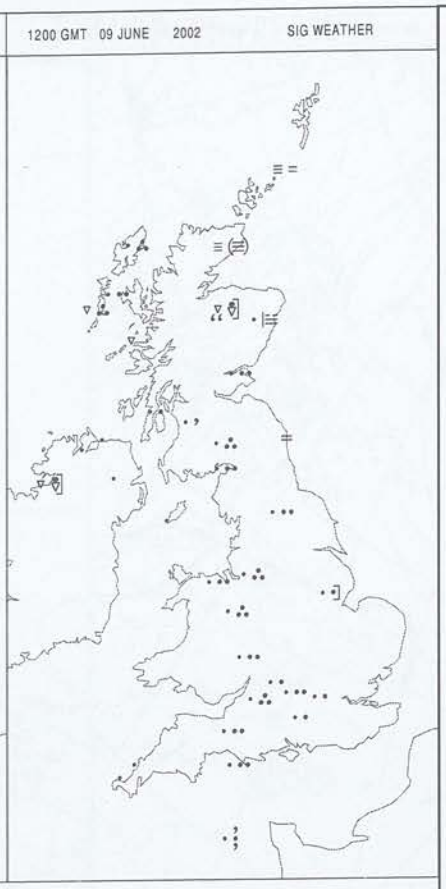
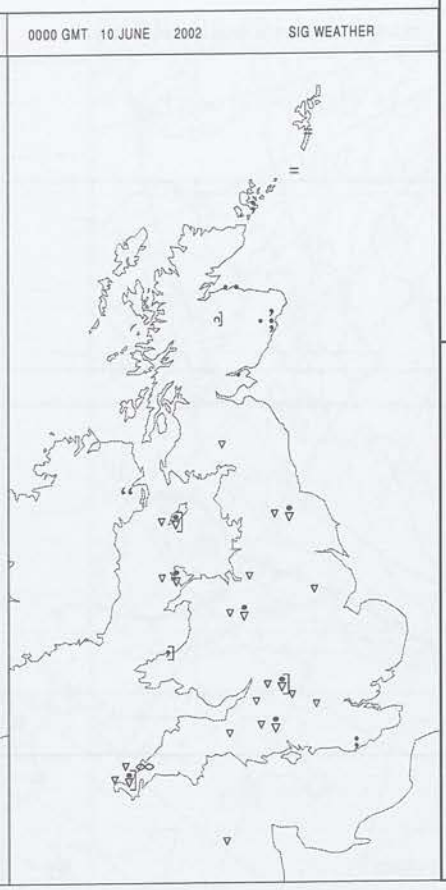
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 09 June 2002.

Sunday began with outbreaks of rain, locally heavy, over western Scotland and Northern Ireland, with some patchy light rain in other western fringes of the mainland. Eastern areas remained dry with some patchy mist or fog.

By morning some more organised rain had arrived in Southwest England and South Wales, whilst the light patchy rain had extended into central parts. Apart from the odd spot of rain, eastern areas remained dry throughout the morning, but eastern Scotland was plagued by some fog patches.

In the early afternoon westernmost parts of Scotland, Northern Ireland, Wales and Southwest England began to brighten up in the wake of the persistent rain which by now as affecting central parts of Britain. At the same time the fog on the east Scottish coast slowly edged northwards.

Through the afternoon rain continued to move east into the remaining parts, which had hitherto been largely dry, followed by brighter weather. By early evening though, some heavy showers were starting to feed into the west.

Temperatures were rather warm in Northeast Scotland, rather cool in Southwest Scotland but otherwise within 2 degrees of normal.

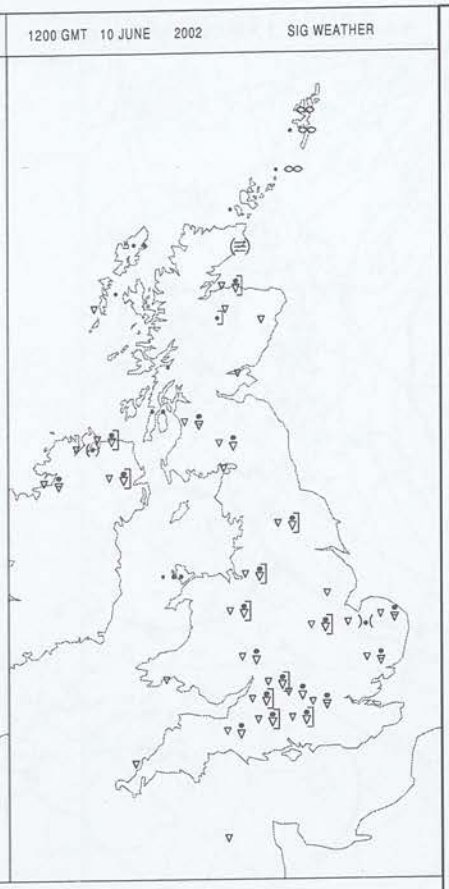
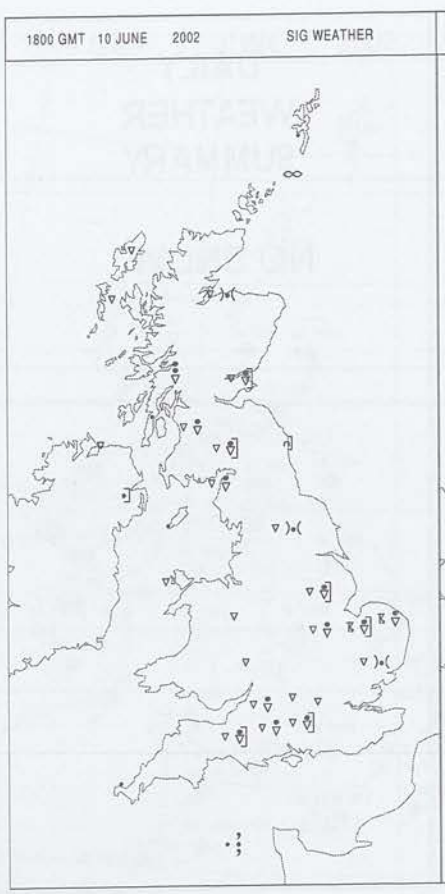
SIGNIFICANT WEATHER





Summary of UK Weather for Monday 10 June 2002.

The night was mostly cloudy over Scotland and northeast England with outbreaks of rain, although the rain turned more showery towards morning with lengthening clear, then sunny spells. England, Wales and Northern Ireland had clear intervals and showers, the showers mainly in the west and north.

During the day, most parts of the country had a mixture of sunshine and showers. The showers were heavy in places, with hail reported from the Southern Uplands, and thunder was heard in East Anglia, southeast England and Lincolnshire. There were some sunny spells, especially around coasts, particularly the south and west coasts of England and Wales, along with the northeast coast of Scotland. During the evening, showers continued across northern and western Britain, but became scattered in the east and south.

Most parts of the country had a rather cool day.

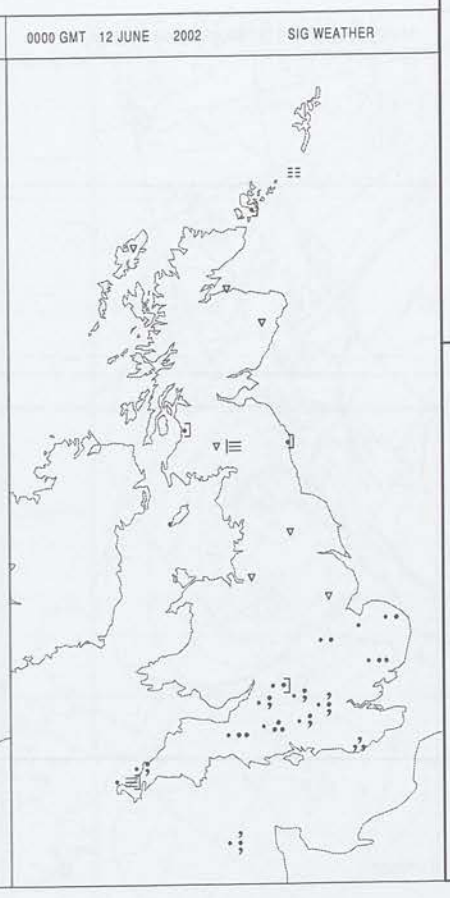
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 11 June 2002.

Showers affected some western parts during the night. Elsewhere it was a dry night with clear spells, although the far southeast of England saw some rain for a time.

Northern Ireland had a showery day. The showers were heavy in a number of places. Between the showers, there were some brighter spells. The showers slowly died away during the evening.

Scotland also experienced showers. The showers were mostly in the west at first, but developed further east during the morning. Northeastern parts of Scotland though, especially the Northern Isles, saw very few showers and had the best of the sunshine. The showers were heavy and locally thundery. Most of the showers died away during the course of the evening.

Northern England, Wales and the Midlands saw some showers during the day, although these largely died away during the afternoon. Most parts had sunny spells. Southern counties became increasingly cloudy through the afternoon with outbreaks of rain pushing into southwest England late in the day and then across southeast Wales and the rest of southern England during the evening.

It was warm across parts of northeast Scotland. Elsewhere, it was rather cool.

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 12 June 2002.

Wales and England, especially the midlands and the south, had a cloudy night with some rain at times but the rain gradually died out by mid-morning and some bright or sunny spells developed through the day. However, the sunshine was rather hazy at times with a lot of high cloud which thickened up at times to give patchy rain over the south in the afternoon and evening.

Northern England(especially the far north), Northern Ireland and Scotland had a mixture of clear spells and scattered showers overnight, the showers mainly in the west and mostly light. As the day wore on the showers became more frequent, and heavier in places, and eventually more prolonged spells of rain affected Northern Ireland and western and southern parts of Scotland. However, sheltered parts of the east and north(such as the Moray Firth and northeast England) had just isolated showers and plenty of sunshine(Shetland was the sunniest place in the UK).

Temperatures were generally around, or a little below, the seasonal normal, though most of the northwest of the UK was cool or rather cool.

EXTREMES

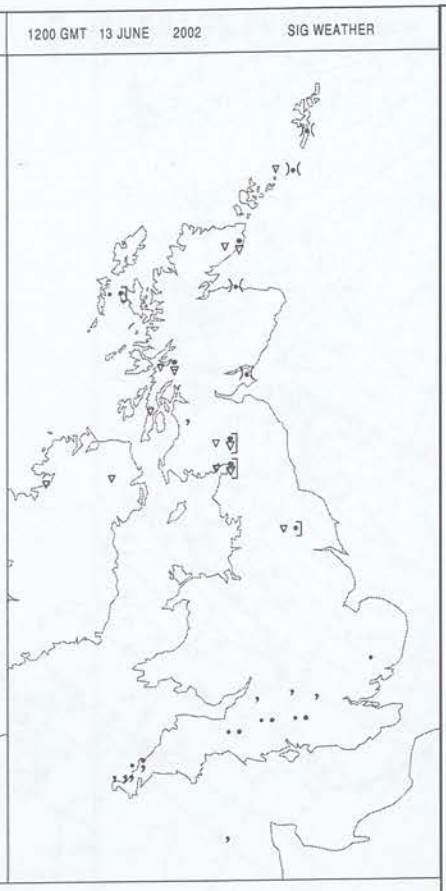
SIGNIFICANT WEATHER



Summary of UK Weather for Thursday 13 June 2002.

Scotland, Northern Ireland and the north of England had a mixture of clear periods and scattered showers overnight but these very slowly died out during the day with many places staying dry and having some good sunny spells, especially in the Northern Isles where Shetland was once again the sunniest place in the UK. A few light showers remained over the highlands into the evening.

England and Wales were generally cloudy but with some clearer or brighter spells, especially in the north in the first part of the day, and in the south in the afternoon. Pulses of rain, mainly light, moved east during the night and morning, especially in the south. During the afternoon these pulses aligned themselves into a band of persistent rain, some heavy at times, lying from Ireland over Wales and into the midlands and East Anglia, and this became broader and moved slowly north to reach Northern Ireland and northern England during the evening, and to southern Scotland by the end of the day.

Temperatures were rather cool generally, though southern parts were near normal.

EXTREMES

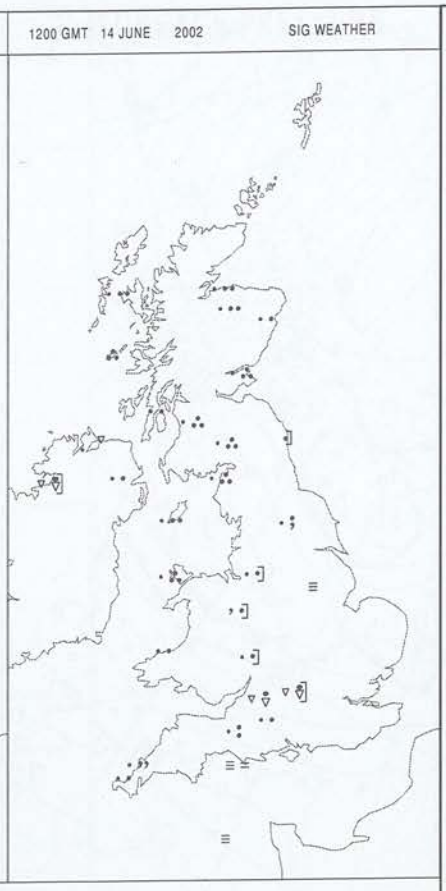
SIGNIFICANT WEATHER



Summary of UK Weather for Friday 14 June 2002.

Overnight a band of rain lying Northern Ireland to Norfolk edged slowly north to reach central Scotland to Cumbria by morning by morning and lingering throughout over Northern Ireland. The south of the country was dry though rather cloudy and misty.

During the morning the rain continued to edge slowly north across Scotland whilst more showery outbreaks started to spread into Wales and the far southwest of England. The rain over Northern Ireland became more patchy too. Across the south and east of England it became a little brighter with a few spells of hazy sunshine. During the afternoon the persistent rain spread north into Northern Scotland whilst outbreaks of rain across England and Wales became heavier, more widespread and thundery. A particularly heavy band of thunderstorms crossed northern England in the late afternoon and evening, and some thunderstorms crossed the southeast of England. By evening the rain was clearing from the north and east, leaving a few showers in the west.

Temperatures were mostly near normal but warm, locally very warm, in more eastern and southeastern parts of England.

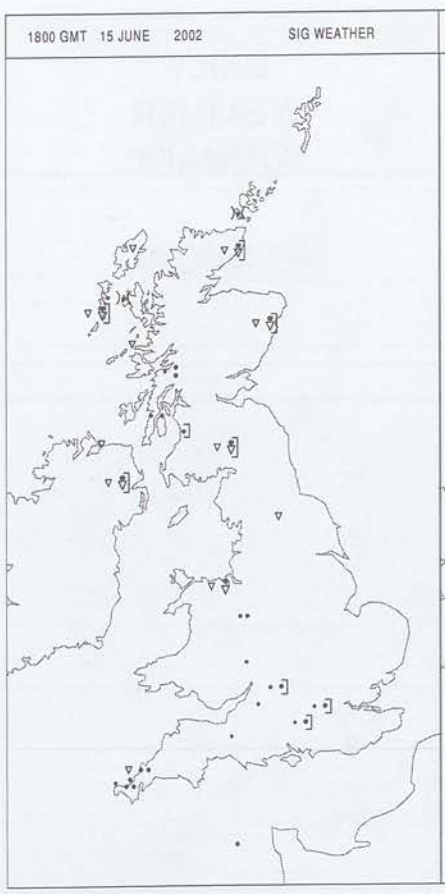
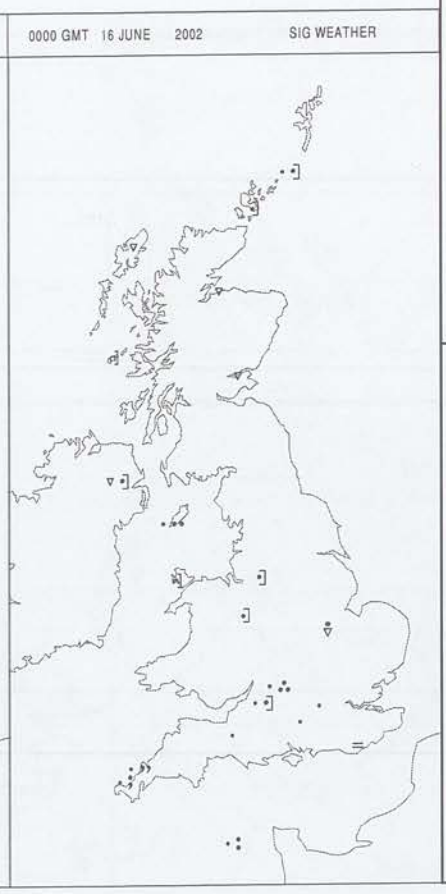
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 15 June 2002.

Overnight, many central and eastern parts of England were dry with clear periods. Across Northwest England, Wales, Northern Ireland and Scotland there was more cloud bringing some occasional showers. On Saturday, the eastern half of England began sunny but elsewhere there was more cloud with a scattering of showers. Through the day the cloud amounts generally increased, with sunshine becoming more limited, and by early afternoon an area of rain had spread into Cornwall. This pushed quickly northeast across southern and central England, becoming more showery as it did so. The rain moved through the London and Birmingham areas early evening and cleared the east coast mid evening. By this time, another area of rain had moved into the southwest and into South Wales with rain into Northern Ireland later. Scotland and northern England saw variable cloud, and a few showers lingered across central and western Scotland.

Temperatures were mostly near normal, but it was rather cool in the Southwest, and East Anglia, east and northeast England were warm. It was very warm in parts of eastern Scotland and the Highlands.

SIGNIFICANT WEATHER

Summary of UK Weather for Sunday 16 June 2002.

Rain affected many places for a time overnight, but was largely confined to northern Scotland towards the end of the night. Southern counties became increasingly misty with hill and coastal fog. Some light drizzle was also evident.

The rain cleared away from northern Scotland during the morning. The rest of the day was then largely dry with some bright or sunny spells developing. The rest of Scotland, together with Northern Ireland and northern England started dry, and bright in the east, but rain swept across most parts during the afternoon. The rain was heavy in places. Northern Ireland and northern England became drier during the course of the evening.

Wales and the rest of England had a cloudy start to the day with hill and coastal fog affecting southern areas. Light drizzle also affected parts of the south during the morning. Many places remained rather cloudy but some bright or sunny spells developed, chiefly during the afternoon across the more southern counties and also the Channels Islands.

It was warm or very warm across eastern England and northern Scotland. Elsewhere the temperatures were mostly close to or a little below normal.

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 17 June 2002.

Rain affected northern Scotland for a time before clearing away northwards late in the night. The Northern Isles remained wet though. Elsewhere, many western areas were rather cloudy. Hill and coastal fog, together with some light rain and drizzle, affected the southwest. Remaining areas had a dry night. The winds freshened across northwestern parts during the night.

Northern Ireland had a dry, bright but windy day. There was some sunshine during the morning but the afternoon was on the cloudy side.

Much of Scotland had a good deal of cloud through the morning with some rain in the far north. Sunny spells developed for the afternoon. Many places were dry although some showers were evident in the northwest. It was a very windy day, especially in the west with gusts in excess of 50 knots. Stornoway, Outer Hebrides, recorded a gust of 64 knots.

Wales and the western half of England had a good deal of cloud with hill and coastal fog in the southwest. The cloud tended to thin and break up more in the afternoon, allowing some brightness through. The rest of England had a dry and largely sunny day.

It was generally warm or very warm, but hot locally very hot across East Anglia and parts of southeast England.

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 18 June 2002.

During the early hours thundery showers developed over Southeast England and East Anglia with some very localised heavy downpours; 19.4mm was recorded at Dane End in east Hertfordshire for example. Elsewhere many places were dry with a line of patchy rain in the west and a few showers in western Scotland.

The thundery downpours continued in the Southeast of England and East Anglia throughout the morning, whilst most remaining parts of the England and Wales were largely dry and bright save for a scattering of light showers. Northwest Scotland was again rather windy, although less so than during the previous day, but western Scotland and Northern Ireland had rather frequent and prolonged outbreaks of showery rain.

The thunderstorms finally cleared into the North Sea early in the afternoon, and then the bulk of England and Wales were dry with increasing amounts of sunshine, although still there were a few scattered light showers. Western Scotland and Northern Ireland continued to experience showery bursts of rain with some of these crossing central parts into eastern Scotland.

Temperatures were very warm in the east, near normal in the west.

EXTREMES

Highest Maximum:

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 19 June 2002.

Through the early hours of the morning there were frequent showers across western Scotland, some of which were heavy, whilst parts of Northern Ireland caught some less frequent and less intense shower cells. Elsewhere it was dry with clear spells and with just a few isolated mist patches.

During the morning some showers penetrated through the Forth-Clyde valley to reach eastern parts of Scotland and a few also developed in Cumbria. Northern Ireland continued to experience showers but England and Wales was largely dry with sunny periods and just the odd scattered light shower affecting Southwest England and South Wales.

The afternoon and early evening saw a gradual diminution in shower activity across Northern Ireland and Scotland with by mid evening a line across Dumfries and Galloway into east Ayrshire and Lanarkshire, the main area still affected in Scotland. Remaining parts were generally fine with many places in the south and east having in excess of ten hours of sunshine.

Temperatures were rather warm in most eastern localities but in the west temperatures were generally close to the mid June norm.

EXTREMES

SIGNIFICANT WEATHER

Summary of UK Weather for Thursday 20 June 2002.

There were some outbreaks of rain in the southeast corner of England and in northern and western Scotland as well as a few showers in Northern Ireland. Otherwise it was a dry night. Where skies cleared there were a few mist patches for a time.

Any showers in the southeast died out during the morning and then southern England had a dry day with some good spells of sunshine, especially along the south coast. Many other parts of the United Kingdom also had a dry day with some bright or sunny spells but there were showers across Scotland, some of them heavy, and a few across the East Midlands and Lincolnshire for a time.

During the evening the showers continued across northern Scotland but England and Wales were largely dry. Some persistent and, in places, heavy rain spread into Northern Ireland, western and southwestern parts of Scotland. There was also some rain moved into Cornwall.

Temperatures were mostly near normal but it was warm in central and eastern England and in northeast Scotland.

SIGNIFICANT WEATHER

Summary of UK Weather for Friday 21 June 2002.

There were outbreaks of rain, some heavy, across Northern Ireland and western Scotland during the night and some spread into west Wales and southwest England. Some showery outbreaks also ran across southern counties of England at the end of the night. Elsewhere it was mainly dry.

By day there were some showers over Northern Ireland and in western Scotland and there were also across the Pennines and northwest England. It was generally damp and drizzly in the far southwest with some heavier pulses of rain later in the afternoon. Elsewhere it was mainly dry. Scotland and northeast England were largely cloudy with the brightest weather in southeast England and in the far north of Scotland.

In the evening some heavy bursts of rain ran across the south and the showers in Northern Ireland, southwest and central Scotland became heavier and more widespread. Some the evening showers in Northern Ireland were thundery. There were still some showers in northwest Scotland.

Temperatures were mostly around normal but it was warm in some brighter southeastern areas and in the north of Scotland.

SIGNIFICANT WEATHER

Summary of UK Weather for Saturday 22 June 2002.

Scotland, Northern Ireland, the far northwest of England and west Wales were showery throughout but with some clearer or sunnier intervals. Some showers were heavy in places, especially in the west of Scotland and in Northern Ireland. Glenanne in Newry was the wettest place in the UK with 0.82 inches. Most of England and Wales started cloudy but mostly dry. However, some rain affected the southeast and East Anglia at first. After mid-morning some rain moved east across southwest England and south Wales and then erratically across into the midlands, East Anglia and the rest of southern England during the day. The rain was, for the most part, light and patchy and the cloud was often thin in the east to give some bright spells here too, and it became quite sunny in the midlands and northern England during the afternoon, and with clear spells here later. By evening the patchy rain became confined to the far southeast before dying out, leaving some clear spells. A few showers later affected west Wales and southwest England. Temperatures were rather cool generally.

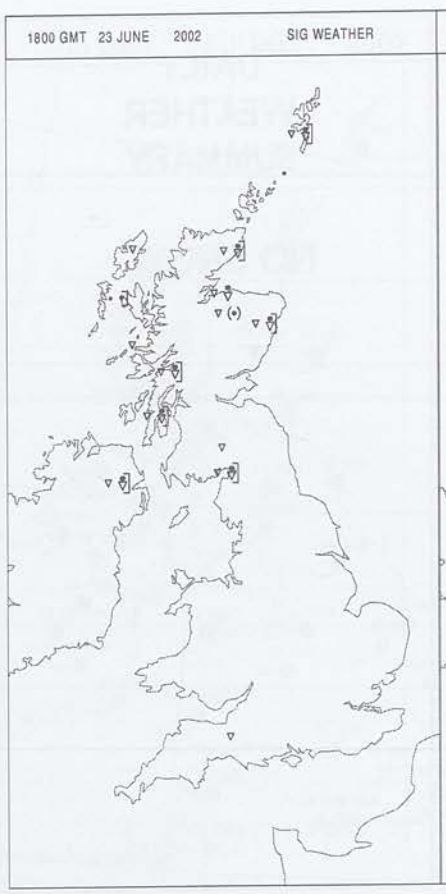
SIGNIFICANT WEATHER



Summary of UK Weather for Sunday 23 June 2002.

Outbreaks of rain drifted eastwards across Scotland through the night, mainly north of the central belt. A few showers also affected southern Scotland, northern England and north Wales. However, elsewhere it was a largely dry night with good clear spells, particularly in the southeast.

Outbreaks of rain continued to affect the northern half of Scotland but also spread into Northern Ireland, southern parts of Scotland and into the extreme north of England. The rain was patchy, consisting mainly of light showers. Across the rest of England and Wales, apart from a few isolated showers, it was a largely dry day with variable cloud cover and sunny periods. The best of the sunshine was across the southern halves of both England and Wales.

Through the evening drier weather spread across northwest Scotland, and elsewhere across Scotland the showery outbreaks of rain began to peter out. The showers also died out across Northern Ireland England and Wales leaving most parts with a fine end to the day.

It was warm across the extreme north of Scotland but for most of the UK temperatures were close to normal.

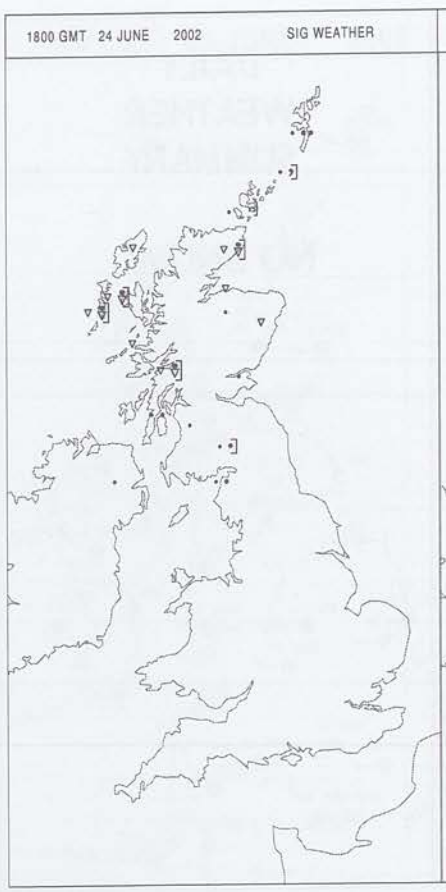
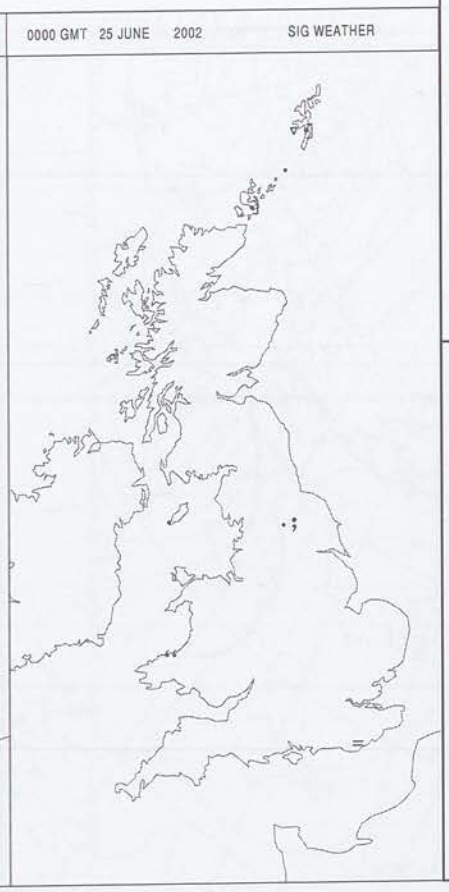
SIGNIFICANT WEATHER





Summary of UK Weather for Monday 24 June 2002.

Lingering showers cleared eastern Scotland during the early hours. That left most of the UK with a dry night. However, cloud and patchy rain pushed in across the western Isles and into western parts of northern Ireland around dawn. For much of England and Wales skies were largely clear through the night but a few isolated mist patches developed.

Through the morning patchy rain drifted eastwards across Northern Ireland and Scotland, also brushing across more northern parts of England. Through the afternoon the rain formed into a more organised band, moving south-eastwards with brighter, weather and scattered showers following. However the band also gradually weakened and by the end of the afternoon consisted of only patchy rain across the Scottish Borders. The remnants of this rain edge across into northern England during the evening. Apart from the far north of England, most of England and Wales had a dry day with only patchy cloud and plenty of sunshine, and a fine evening followed.

It was rather cool across parts of southern Scotland and the far north of England but for most of the UK temperatures where close to normal.

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 25 June 2002.

A band of cloud, and the odd light shower, moved slowly southwards through the night, reaching Lincolnshire, the Midlands, Wales and the West country around dawn. Ahead of this cloud band, skies were largely clear and the cloud broke across northern England as the band moved south. For Scotland and Northern Ireland skies were rather cloudy through the night, with some patchy rain across northern Scotland.

A sunny start greeted East Anglia and the Southeast but the cloud band straddling England and Wales moves slowly south-eastwards during the day. It became largely confined to more southern counties by the end of the afternoon with good sunny spells developing across the rest of England and Wales. For Scotland and Northern Ireland cloud cover varied through the day, and there were a few light showers, mainly across the far north.

Through the evening the cloud across southern counties began to melt away leaving England and Wales with clear periods. At the same time, cloud and rain began to push across northwest Scotland.

Temperatures were close to normal across most of the UK.

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 26 June 2002.

The bulk of the country was dry in the early hours with clear periods in many parts. Across the north of Scotland though, it was more cloudy with some outbreaks of rain. A few mist or fog patches developed in rural areas in the south, but these were quite short-lived with the rain cascading south across Scotland and into the north of Northern Ireland by morning.

Showers subsequently followed the rain band, into northern Scotland. Much of England and Wales though, had a dry morning with plenty of sunshine but the rain progressively moved south into northernmost parts of England.

The afternoon saw the rain band continuing to weaken as it sank south across northern England, with some increase in cloud across Wales and the Midlands. There were still, however, copious amounts of sunshine further south.

In the evening bands of showers followed the fragmenting rain band south as far south as Norfolk. Further south it still remained dry but with a slow increase in cloud amounts.

Temperatures were warm in the south but normal around south and west facing coasts and a little below normal in the north.

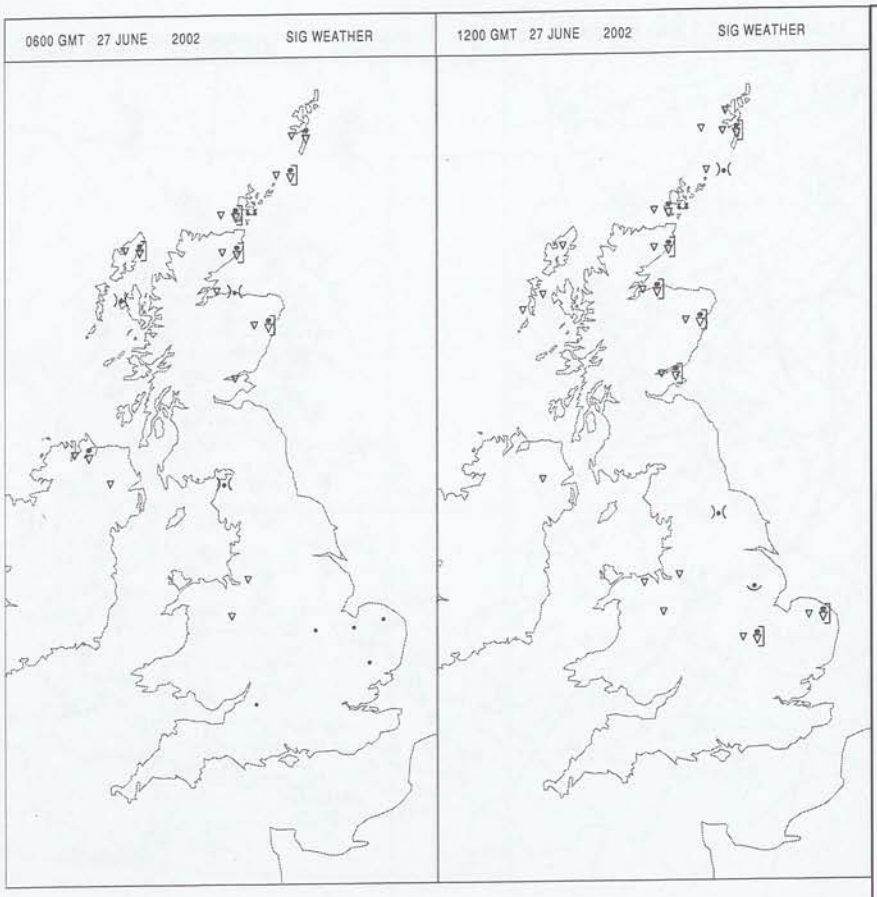
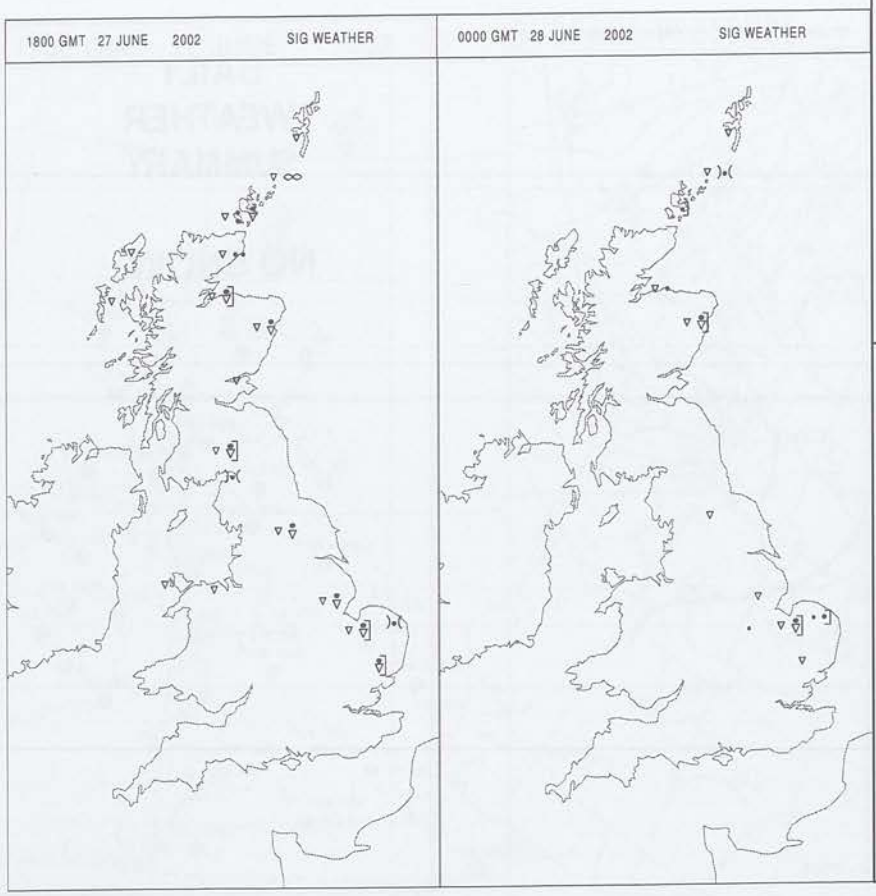
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 27 June 2002.

There were a few showers overnight across the north and east of Scotland and Northern Ireland but the rest of Scotland was dry. Most of England and Wales had a dry night but there was some light rain over East Anglia at first.

Northern Ireland had a dry day with variable cloud. Showers continued over Scotland, especially in the north and east, but by evening the showers were mostly confined to Moray and Aberdeenshire.

England and Wales had a largely sunny start but cloud soon built up to give a cloudier spell in most parts. Many places stayed dry and sunshine amounts increased again in the afternoon and evening as the cloud dispersed. Some showers developed through the morning over northeast England, becoming more widespread by midday as far south as the Wash. In the evening a few heavier showers were reported over Yorkshire and Lincolnshire but they petered out in most other eastern counties.

Temperatures were close to average in many areas but it was rather cool across parts of southern England and East Anglia.

SIGNIFICANT WEATHER

Summary of UK Weather for Friday 28 June 2002.

Much of the United Kingdom had a dry night with variable cloud and clear spells. There were a few showers across Northern Ireland and some light rain or showers across east and northeast Scotland, East Anglia early in the night and west Wales.

Northern Ireland had a bright day with just a scattering of light showers in the morning. The evening was dry but mainly cloudy. Cloud was variable over Scotland with the best of the sunshine across the Shetland Isles and southern Scotland. Cloud increased later and some showery rain developed in the north and west, mainly north of the Great Glen and more especially towards evening.

Most of England and Wales had a dry day but with variable amounts of cloud. The early light coastal showers in Wales soon dispersed after sunrise. The best of sunshine was along the south coast of England, in the Channel Islands and over southwest England and Wales. A few showers affected Norfolk in the late evening.

It was mostly a rather cool day but temperatures were close to average over most of Scotland.

SIGNIFICANT WEATHER

Summary of UK Weather for Saturday 29 June 2002.

There were some outbreaks of rain or drizzle across Scotland through the night and isolated showers for a time in East Anglia, otherwise most places had a dry night.

Most of Scotland saw some rain during the morning and early afternoon, some of it heavy. In the afternoon many areas became drier and brighter for a time. There were also a few outbreaks of rain or drizzle across Northern Ireland and down the west coast of England and Wales but for most of England and Wales it was a dry day with good bright or sunny spells. The best of the sunshine was in the south and southeast.

In the evening, most of England and Wales were dry but there were some showery outbreaks of rain in the west and north. Northern Ireland was largely dry, as were large parts of Scotland but there were outbreaks of rain stretching from the northwest, across the Highlands and into southeast Scotland.

Temperatures were mostly around normal although it was rather cool in some western coastal areas of England and Wales.

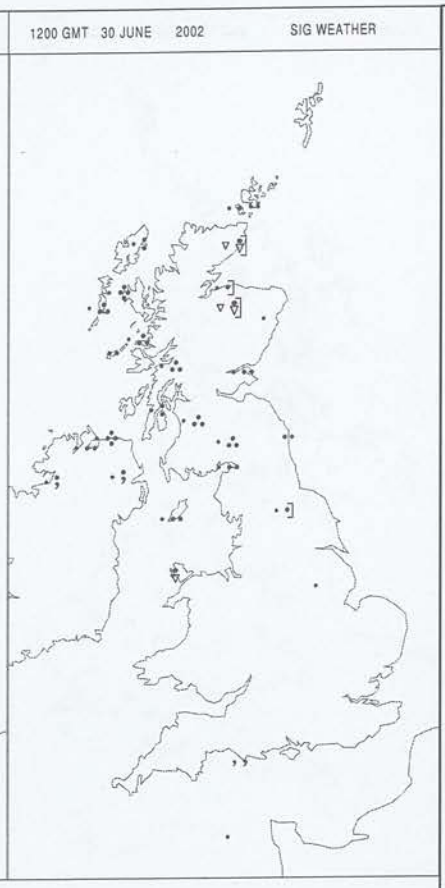
SIGNIFICANT WEATHER



Summary of UK Weather for Sunday 30 June 2002.

Rain over eastern Scotland extended southwards across northeast England and into the Vale of York through the night. Some patchy rain also affected western Cornwall. Elsewhere, it was a largely dry night with variable cloud and clear spells. However, towards the end of the night some persistent rain began to push across Northern Ireland and western fringes of Scotland.

Through the morning the rain in the west made progress eastwards across Northern Ireland, Scotland and more northern parts of England. Elsewhere it was a largely dry morning, with some reasonable sunny spells across East Anglia and the Southeast. Through the afternoon the rain continued to spread eastwards, although southeast England remained dry until evening. At the same time the rain became patchy and began to peter-out across Northern Ireland and more western parts of Scotland.

Through the evening the main body of rain became confined to East Anglia and Southeast England, leaving just pockets elsewhere, however skies remained rather cloudy.

Temperatures were close to normal across the Midlands, East Anglia and southern counties of England. Elsewhere it was a rather cool day.
